Predictive Services Discussion

Warmer and drier through Wednesday then colder Thursday through Sunday with good chance of rain and mountain snow for the Northwest, Idaho and Montana. A building high pressure ridge will bring warmer and drier weather to most of the West. The ridge will breakdown Wednesday with gusty winds developing over portions of the Northwest, Northern Rockies and the north half of the Great Basin. A strong upper low developing over the Northwest Thursday will bring widespread rain and mountain snow to most of the Northwest, Idaho and Montana for Thursday through Sunday. Further south, strong winds are expected over Nevada Thursday.

DOWNHILL FIRELINE CONSTRUCTION CHECKLIST

Downhill fireline construction is hazardous in step terrain, fast-burning fuels, or rapidly changing weather. Downhill fireline construction should not be attempted unless there is no tactical alternative. When building downhill fireline, the following is required:

- Crew supervisor(s) and fireline overhead will discuss assignments prior to committing crew(s). Responsible overhead individual (TFLD or ICT4 qualified or better) will stay with job until completed.
- Decision will be made after proposed fireline has been scouted by supervisor(s) of involved crew(s).
- LCES will be coordinated for all personnel involved.
 - Crew supervisor(s) is in direct contact with lookout who can see the fire.
 - Communication is established between all crews.
 - Ensure rapid access to safety zone(s) in case fire crosses below crew(s).
- Direct attack will be used whenever possible; if not possible, the fireline should be completed between anchor points before being fired out.
- Fireline will not lie in or adjacent to a chute or chimney.
- Starting point will be anchored for crew(s) building fireline down from the top.
- Bottom of the fire will be monitored; if the potential exists for the fire to spread, action will be taken to secure the fire edge.
